Hello,

As part of our effort to better understand the proposed EVelution cobalt processing facility, we are seeking information regarding the project's anticipated waste streams and waste-management plans.

We would appreciate any publicly available information regarding:

- The types of waste expected to be generated by the facility.
- Estimated annual waste volumes.
- Whether the waste is classified as hazardous or non-hazardous.
- The planned disposal or management method.
- The location of any proposed disposal facilities.
- Whether Copper Mountain Landfill has been identified as a disposal location for any waste stream associated with the project.
- Whether moisture retained in the waste stream accounts for a portion of the facility's net water consumption.
- Expected truck traffic associated with waste transportation.

Our goal is simply to better understand the project and the information available to the public.

Thank you for your time and assistance.

Maria Coffee
